	Human Ortholog	OXTR

説明

These strains carry loxP sites flanking exon 1 of Oxtr gene. When crossed with a Cre recombinase-expressing strain, this strain is useful in eliminating tissue-specific conditional expression of Oxtr gene.

*Literature published using this strain should indicate: Oxtr-Flox(1) mice (Cat. NO. NM-CKO-240723) were purchased from Shanghai Model Organisms Center, Inc..
