説明

All sequences from the upstream of mouse H2-Ab1 gene exon 2 to the upstream of the H2-Ea-ps gene exon 1 were knocked out to obtain H2-Ab1、H2-Aa、H2-Eb1、H2-Eb2、H2-Ea-ps knockout mouse models. These MHC class II molecule-deficient mice were on the NMG genetic background and also lacked cell surface expression of both class II-A and class II-E MHC proteins.

応用分野: immunodeficiency, immune system, transplantation research

*Literature published using this strain should indicate: MHC ClassII(I-A/I-E)-KO(NMG) mice (Cat. NO. NM-NSG-003) were purchased from Shanghai Model Organisms Center, Inc..
