## 説明

These mice carry loxP sites flanking exon 5-8 of Tgm2 gene. When crossed with a Cre recombinase-expressing strain, this strain is useful in eliminating tissue-specific conditional expression of Tgm2 gene.

**応用分野:** Research on phospholipase C pathway and respiratory electron transport, ATP synthesis through chemical permeation coupling, and heat generation through uncoupling proteins

\*Literature published using this strain should indicate: Tgm2-Flox mice (Cat. NO. NM-CKO-200229) were purchased from Shanghai Model Organisms Center, Inc..
